🐞 Bug Report: Missing Validation in Shipping Address Form

🐞 Bug ID	BUG002
🔍 Title	Shipping form allows invalid phone numbers and fake/incomplete address
🔴 Severity	High
🎯 Priority	High
💻 Environment	Browser: Firefox Version: 139.0.4 (64-bit) OS: Windows 10
🧍 Reporter	Menna Ashraf
📅 Date Reported	19/6/2025

🔍 Description:

 During checkout, the shipping form allows clearly invalid and fake inputs for phone number and address fields. This behavior is inconsistent with standard e-commerce validation requirements and can result in failed deliveries or data quality issues.

🔄 Steps to Reproduce:

1. Go to:

   https://magento.softwaretestingboard.com/

2. Add any product to cart
3. Click "Proceed to Checkout"
4. In the shipping form, enter:

   Phone Number: "abc"

Street Address: "test test"
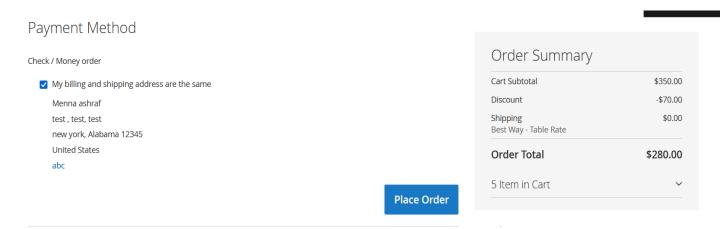

5. Click "Next" to proceed to shipping method

❌ Actual Result:

- User is allowed to proceed with invalid phone number and address
- No validation message is shown
- Form accepts data that is clearly incorrect

✅ Expected Result:

- Phone number field should validate format (e.g., require digits, at least 7–10 characters)
- Address fields should require a realistic structure (e.g., not empty or just 1–2 words)
- User should be blocked from continuing if inputs are invalid

📝 Notes / Additional Info:

- Bug occurs for both guest and logged-in users
- No HTML validation or client-side JavaScript validation observed
- Business-critical: affects shipping accuracy and customer experience
